Technology vision with a human touch

Our core services
Team Extension
We help companies enhance their capacity really fast. Teams of 3-5 remote engineers are always ready to join you for a quick extension of your team.
Agile Software Development
We are responsible for agile-project delivery. The Agile approach to software development results in a product that is designed, engineered, and validated to decrease risk and increase business value to the greatest extent possible.
Squads Product Development
We lead and deliver continuous value to business solutions through product development and design. Development squads - these are small, self-organized, multifunctional teams – typically comprising visual and user experience (UX) designers and analysts, developers, quality engineers, and product managers.
Agile partnership and cooperation with the client
1. Identifying what our client truly needs and expects from us
2. Making partnership commitment and building the right team
3. Onboarding the team
4. Managing change: replacing or expanding the service at an early stage
Our focus while building agile teams
Cooperation in the team: when an Agile team works together, almost every idea is heard by everyone.
Communication and improvement: effective communication is the key to an Agile team. The retrospective is the improved function of agile teams.
Motivation: every Agile team member is personally motivated by contributing value to the project.
Customer Involvement: through every step of a project improvement, the customer can give input, make changes, and interact with the Agile team.
