Techreviewer Rating

**4.9**  
★★★★★

[PROFILE](#)

Python is an interpreted, object-oriented, high-level programming language with dynamic semantics. It is universal, therefore it is suitable for various solutions and many platforms, starting with iOS and Android and ending with server OS.

Python development can be found on the web and on mobile devices, in applications and solutions related to machine learning (neural networks and artificial intelligence), and also as an embedded system.

Python web development services began to be used by popular products such as YouTube, Instagram, Quora, Facebook, Pinterest, Reddit, Google, Netflix and Spotify, and Python programming language became a new favorite among development companies. From 2016 to 2017, the annual growth of Python in the US and UK markets was much higher than the growth rate of PHP.

Python frameworks such as Django and Flask have recently gained widespread popularity among web developers. These frameworks allow you to create server-side code (backend code) in Python that runs on the server, unlike frontend code that runs on user devices and browsers.

In our new research, we compiled a list of the most popular companies that specialize in Python web development.
