It may be hard to believe, but the age of robotics has dawned upon us. It's an overstatement to say that robots are taking over the world, but I can confidently say that it's just a matter of time. Robotics companies have increased prevalence in just about every industry, from manufacturing, construction, healthcare to education and defense.

Just when most industries experienced their worst years due to the COVID-19 pandemic, it's surprising to know that the top robotics companies somehow found in this crisis a source of growth. The seemingly endless list of customers includes private businesses, consumers, and products manufacturing from diverse industries.

What jobs/services can companies outsource?

In the past, we imagine a manufacturing plant full of robotics whenever we hear the word 'automation'. While it's true that there is a worldwide shift towards automation - which means replacing human labor with machine labor, it's not all about robots. The best robotics companies don't just create towering robots that build cars in record time or self-driving vehicles; they likewise produce subtle robotic features in software applications.

Robotics companies have helped revolutionize industries and businesses alike. The manufacturing industry has been using robotics since the 1960s, while the Healthcare industry got a boost with telemedicine and surgical robots.

Here are some of the jobs/services that businesses can outsource to robotics companies:

- Customer service
- Assembly lines
- Truck drivers, taxi drivers, bus drivers
- Bank tellers
- Cashiers
- Warehouse & stockroom moving
- Researchers & analysts
- Pilots
- Bartending
- Stock trading
- Medical staff, doctors, surgeons, etc.
- Travel agents

What top robotics companies do?

Robotics companies create robots, both simple and highly complex, and attempt to sell them to consumers and companies for specific purposes. Companies use robots for various purposes in industries as diverse as mining, healthcare, warehousing, food and beverages, and many more. Ironically, companies use robots to build - robots.

How much do robotics companies charge?

For many companies, the idea of replacing their human employees with robots and computers is enticing. Robots can work non-stop and can work faster and more efficiently compared to humans. It has made tremendous improvements in the last few years that more and more companies are pushing for automation.

But here lies the interesting question - how much do top robotic companies charge a company for building a machine? The answer is there is no accurate value or price for robotics. The cost may range between a few hundred thousand dollars to more than a million dollars for complex machines that require extensive research and expensive development spending. For robotics developed for consumer usage, it can range between \$20 to a few hundred dollars.

The price of robotics primarily depends on its complexity, its usage, and also the cost of other competing products.

How to choose the right robotics company?

More than a hundred robotic startup companies are trying to carve their niche in the booming robotics industry, so it's easy to get blindsided by their offers and outrageous advertisements. Here are some ways on how to choose top robotics companies in the market today:

They don't rush to build robots.

Many startup companies rush to design robots without considering how and why the customers will use the robots.

They engage with their customers.

Robotics companies that creatively engage with consumers predict what robotic features customers will pay for usually become more successful than their competitors.

They don't rely on clever designs.

While clever designs may help sell, the robotics company should have a deep understanding of what angle they need to focus on to have a real competitive advantage. By doing so, it will separate their product from the rest of the competition.

With the current paradigm shift from human labor to automation, it's crystal clear that the robotics industry is here to stay and will change the future forever. The upside of using robotics is endless – from safety, consistency to speed, and efficiency – it's safe to say robotics is a valuable innovation in the world of technology.
